

Process Design and Optimization

? What is It

Process design and optimization is a critical element of success in operations management. Good process design brings good results and the foundation for improvement.

🕒 When

- To **develop** new processes and/or new products
- To **align company teams** when scaling up
- To **identify** areas of improvement, problems and potential risks before going to real production.

🎯 Goals

- **Eliminate** or **reduce wastes** that are included within the cost of the product and related process.
- Activate robust **Standard Work**.

📊 How:
